

Q HOW DOES INVISALIGN WORK?

A Invisalign takes a modern approach to straightening teeth, using a custom-made series of aligners created for you and only you. These aligners are made of smooth, comfortable and virtually invisible plastic that you simply wear over your teeth. Wearing the aligners will gradually and gently shift your teeth into place, based on the exact movements your dentist or orthodontist plans out for you. There are no metal brackets to attach and no wires to tighten. You simply pop in a new set of aligners approximately every two weeks, until your treatment is complete and you achieve the confident smile that you've always wanted. The best part about the whole process is that most people won't even know you're straightening your teeth.

Q HOW MUCH DOES INVISALIGN COST?

A In most cases, Invisalign treatment is comparable to the cost of traditional braces. However, as with other medical treatments, only your doctor can determine the cost, based on your specific needs. Other factors may include your treatment goals, the difficulty of your case, how long you are in treatment, where you live, your orthodontic insurance coverage, and additional factors determined by your dentist or orthodontist. In the U.S., the cost of Invisalign treatment ranges from \$3,500 to \$8,000, with the national average at about \$5,000.

Q DOES INVISALIGN REALLY WORK?

A Yes. Over 1.3 millions patients with a wide variety of dental challenges have been treated with Invisalign. Invisalign was developed with orthodontists and used in dental practices worldwide.

The Clear Alternative to Braces

The hygienic benefits of straighter teeth

HEALTHIER GUMS

Properly positioned teeth are easier to brush and floss than teeth that are crowded, crooked, or spaced too far apart. Properly aligned teeth can help gums fit more tightly around them,¹ which may lead to better periodontal health.

EASIER CLEANINGS

With maintenance of good oral hygiene, the chances of having plaque retention, tooth decay, or periodontal (gum) disease can be reduced.

DECREASED RISK OF ABNORMAL WEAR

Properly aligned teeth can be less stressful on the supporting bone jaw joints.

THE CLEAR ALTERNATIVE TO BRACES[®]

Developed with
Orthodontists,

Invisalign is a virtually invisible solution, so you can smile confidently both during treatment and after. Using a series of clear, removable aligners, Invisalign gradually moves your teeth toward the smile you've always wanted. And, almost no one will know you're wearing them unless you tell them.

Clear, Removable, Comfortable

Invisalign is comfortable to wear and easy to live with. You visit your doctor every month or two to check your progression and get new aligners. Average treatment time is about a year. Because the aligners are removable, you can continue to eat your favorite foods. And you can brush and floss normally to keep your teeth and gums healthy.

RESULTS YOU CAN SEE

BEFORE INVISALIGN

SPACING TREATMENT
Nine months, 19 aligners

AFTER INVISALIGN

CROWDING TREATMENT
Seven months, 14 aligners

Actual treatment time and results may vary.

Treatment Options

Many people believe that Invisalign is only effective at treating minor orthodontic issues. But the fact is that our 96% patient satisfaction rate¹ is a result of successfully treating a broad range of cases, from overly crowded teeth and underbites to jaw problems and tooth misalignment.

CROWDING
Not enough room for the teeth

SPACING
Spaces between the teeth

OVERBITE
Protruding upper teeth

UNDERBITE
Protruding lower teeth

DEEP BITE
Upper front teeth hide lower teeth

OPEN BITE
Back teeth are together but space is present between the front teeth
